DETAILED ACTION

Allowable Subject Matter

1. Claims 1-17 are allowed over the prior art of record.
2. The following is an examiner's statement of reasons for allowance: With respect to independent claim 1, the prior art does not disclose nor teach the metal ion generation region and the mass spectrometry region being formed as a common compartment, the attachment region being provided adjoining the common compartment, and the attachment region being provided with an electrostatic field generating means for forming an electrostatic field for reflecting the metal ions introduced from the metal ion generation region so as to guide the metal ions to the mass spectrometry region, in combination with the remaining aspects of the claim. Since this aspect is not disclosed nor taught, independent claim 1, and its dependent claims 2-11, 13-14, and 16-17, which also incorporate this aspect are deemed allowable over the prior art of record.
3. With respect to independent claim 12, the prior art does not disclose nor teach an aperture by which the metal ions enter the attachment region and an aperture by which the attached ions are ejected from the attachment region being the same common aperture, in combination with the remaining aspects of the claim. Since this aspect is not disclosed nor taught, independent claim 12, and dependent claim 15, which also incorporates this aspect are deemed allowable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent No. 6,635,868 to Shiokawa et al is considered pertinent to applicants' disclosure because of its discussion on a mass spectrometry apparatus and ion attachment. The present application remains allowable over the Shiokawa [6,635,868] since Shiokawa [6,635,868] fails to disclose or teach the metal ion generation region and the mass spectrometry region being formed as a common compartment and the attachment region being provided adjoining the common compartment. Shiokawa [6,635,868] also fails to disclose or teach an aperture by which the metal ions enter the attachment region and an aperture by which the attached ions are ejected from the attachment region being the same common aperture.
